

Flip Adapter

RGB-FA01

Made using an all-metal machining process, this adapter enables users to quickly and easily switch between various RGBBlue System Series accessories such as a beam attachment, condenser lens, filter, and snoot kit.

Features of the Flip Adapter

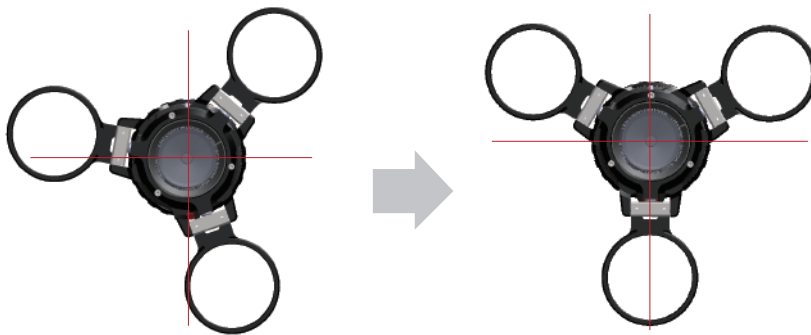

- Durable all-metal machining processed body
- Three flips with a clicking mechanism at 90° intervals

Note: The flips can be removed as required.

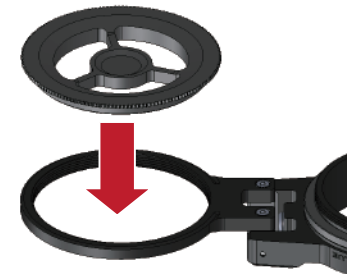

- Position correction mechanism Patent pending

When the conventional screw-in fixing method is used, it is impossible to align the flip adapter's center position with the underwater light's when the thread mount is turned until it stops to tighten it. Thanks to this new mechanism incorporated in the RGB-FA01, the center positions can now be aligned.

- Metallic flips compatible with the M49 thread standard

All RGBBlue accessories in the M49 thread standard can be mounted on the RGB-FA01.

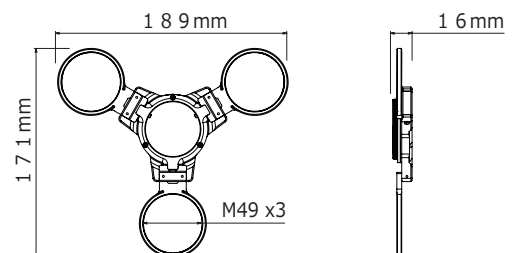

Mounting Sample

Product Specifications

Size : When unfolded H : 171 x W : 189 x D : 16 mm
